

# MEXAR POST TECHNICAL DATA SHEET

## Properties

Mexar Post is a water based formulation designed for addition to pigment printed fabrics. The novel formulation gives outstanding results on a number of different fabrics.

Mexar Post has been optimised to work perfectly with Mexar Tex 1 pigment inks

## Features and Benefits

- • Significant Increase in colour density of prints
- • Reduction in printed handle
- • Significant increase in fastness properties
- • Suitable for cellulosic fabrics and blends
- • Non Yellowing
- • Water based non hazardous components

## Directions for Use

Suggested formulation:

Mexar Post: 500g/Litre

Water: 500g/Litre

Recommended pick up between 70-90% in a padding application  
Dry 110 deg C for 2 mins (or until fabric is dry) or use as part of curing process and following curing instructions of inks (165 deg C).

Mexar Post can also be sprayed onto fabric with the above recipe
